

When selecting a parking spot, the final menu will appear, allowing to select the gate for servicing, optionally call a Follow Me car, or "just" WARP there.

The **"Just warp me there"** option won't activate any service; it will just move your airplane instantly there. This is more convenient than having to go back to the MSFS Main Menu, just to select a different starting position. The Warp me feature can also be used when parked on a Gate, to jump to another gate (or a Runway), or to reposition the airplane in the best place to get services, in case it wasn't parked very well.

The **"Show me this spot"** option will briefly display a Pointer to show the parking position, without selecting it.

The Follow Me Car

A Follow Me car can help you reaching the assigned destination (a Parking spot, but also a Runway) more easily, if you are not familiar with the airport, don't have updated charts, or your charts might be updated but your scenery might not.

The GSX Follow Me car will use data from the airport itself, so it will know where all the Taxiways, Parking spots and Runways are located.

When first called, the Follow Me will arrive from a parking spot of the "Vehicle" type. Depending where you are located when you call it and how the airport is made and how large it is, it might take from few seconds to some minutes for it to arrive.

After landing, we suggest calling it as soon as you vacated the runway, and wait for it until it will circle around your airplane, with the "Follow Me" indication lit.

Slowly accelerate, and the car will start. Try to Follow it from some distance because, if you get too close, the car will try to escape from you. The car will use both the information panel and its own turn indicators to indicate turning. It WILL slow down while turning, so be prepared to slow down as well, in order not to crash into it. If you get really too close, the Follow Me will just "flee" away, terminating the service. This kind of behavior can also be optionally Enabled/Disabled in the GSX Settings page.

Follow Me indications

This is the normal status the light will be when you are following the car.

Slow down will be shown if you are taxiing too fast compared to the Follow Me car speed.

Left or Right arrows will point to the direction for the next turn on a taxiway.

STOP will flash when you are arrived at the destination parking spot, ready to be assisted by a Marshaller or a Docking system.

This means you were too slow and were left behind, so the Follow Me has stopped, waiting for you to catch up.

Follow Me Settings

Some settings related to the Follow Me car, like the taxi speed, or the "flee" behavior, can be configured in the GSX Settings page.
